To: All Coin Mechanisms' customers

RE: RoHS Compliance

Coin Mechanisms Inc. hereby certifies that selected products included in the categories below will be in compliance with European Directive RoHS (Restriction of Hazardous Substances) starting July 1, 2006. Not all products will be brought into compliance at the same time. This will be a phased conversion determined by customer requirement. The product categories scheduled for compliance are:

- Coin, Micro, Intelligent & Defender Comparitors
- Coin Timer Housings
- Gamesman Brand Push Buttons, Reel Mechanisms & Feature Devices
- CCFL Lamps, Inverters & Other Specialty Lighting Products
- Azkoyen Brand Validators, Front Plates & Hoppers

Coin Mechanisms Inc. is now buying electronic components and circuit boards, plastics and screws, metal parts and plating processes that have been certified to us by our suppliers to be in compliance with the RoHS directive. However, there are some components that won't be available from our suppliers until the deadline of July 1, 2006.

Coin Mechanisms Inc. is in the process of phasing out those components that are not in compliance with the RoHS directive and depleting all non-conforming inventories. To the extent possible, this will be accomplished by the RoHS deadline.

Not all products will be made compliant. Certain products, such as the Model CC-33/CC-37 and CC-40, will not become compliant since they are sold only as replacements to machines already in the market and will be eventually made obsolete. Please contact our office, or visit our website (www.coinmech.com), for an updated list of Coin Mechanisms' part numbers that have been brought into RoHS compliance. Letters that address compliance for specific part numbered products are available upon request.

If you should have any questions, please feel free to contact our Customer Service department, or send an e-mail to coinmech@coinmech.com.

Sincerely,
COIN MECHANISMS INC.

Stanley Pierz
President and CEO
